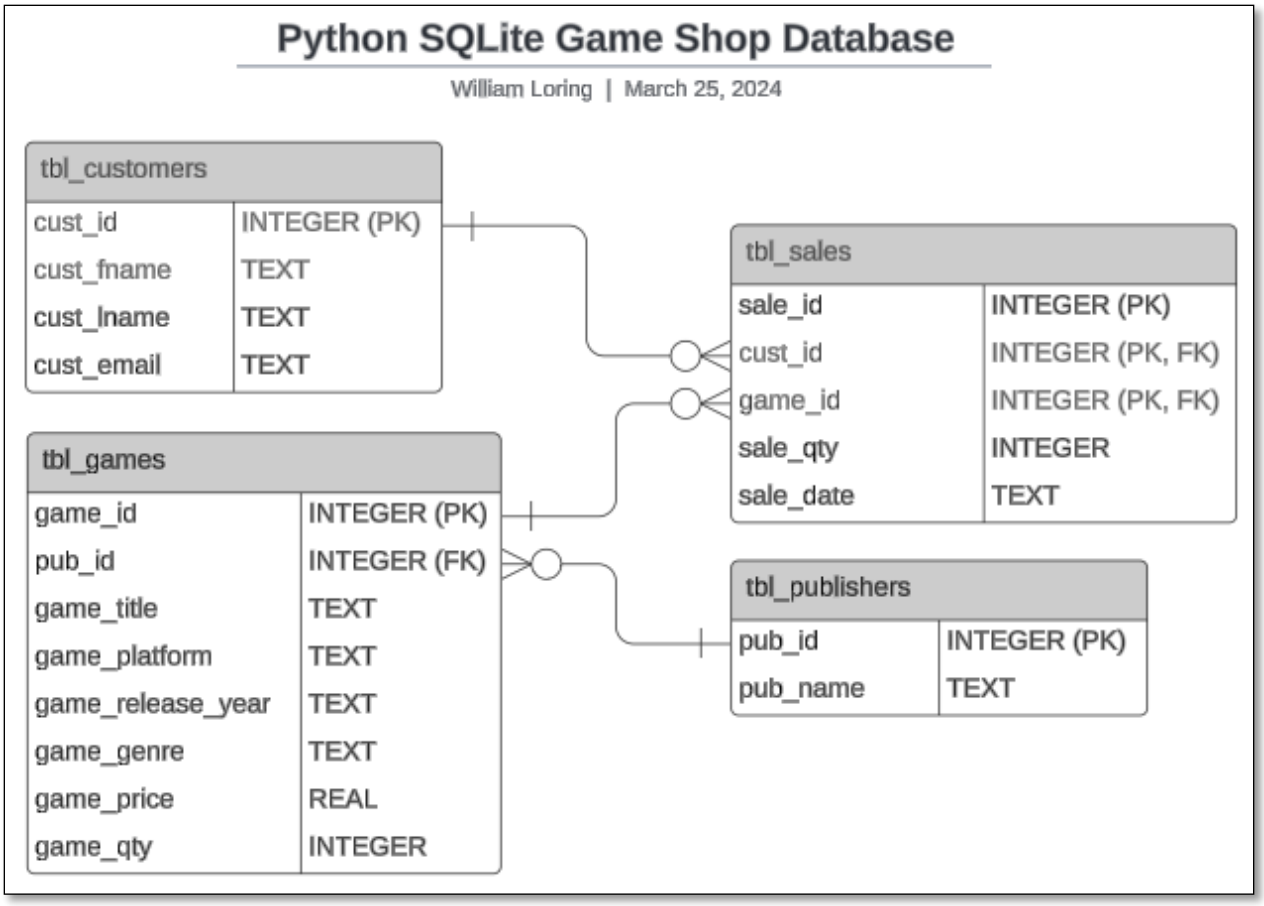
New Table Maintenance Menu Items 5
Assignment Submission.....6

Time required: 90 minutes

- Follow all directions carefully and accurately.
- Think of the directions as minimum requirements.
- Remember to modify to create your own database



Menu Pattern

Here is a possible pattern for a nested menu system.

```
def menu():
    """Nested while loop to display the main menu and sub-menus"""
    # Main menu loop
    while True:
        user_input = input(MENU_PROMPT)

    # -------------------- SALES TRANSACTIONS----------------------------- #
        if user_input == "1":
            # Interior sales transactions loop
            while True:
                user_input = input(SALES_TRANSACTIONS_PROMPT)

    # ---------------------- TABLE MAINTENANCE --------------------------- #
        elif user_input == "2":
            # Interior table maintenance loop
            while True:

            # ---------------------- INSERT PUBLISHER -------------------- #
                user_input = input(TABLE_MAINTENANCE_PROMPT)
                if user_input == "1":
                    display_all_publishers()
                    # Get publisher data from user
                    pub_name = input("Enter publisher name: ")
                    pub_country = input("Enter publisher country: ")

                    # Add publisher to database
                    db_publishers.insert_record(
                        pub_name,
                        pub_country
                    )

                    display_all_publishers()
            # ---------------- INSERT GAME ------------------------------- #
                elif user_input == "2":
                    display_all_publishers()
                    # Get data from user
                    pub_id = input("Enter publisher ID: ")
                    game_title = input("Enter game title: ")
                    game_platform = input("Enter game platform: ")
                    game_release_year = input("Enter game release year: ")
                    game_genre = input("Enter game genre: ")
```

```
                        game_price = input("Enter game price: ")
                        game_qty = input("Enter game quantity: ")

                        db_games.insert_record(
                            pub_id,
                            game_title,
                            game_platform,
                            game_release_year,
                            game_genre,
                            game_price,
                            game_qty
                        )
                        display_all_games()
```

Menu

Connect all existing menu items to existing functions. We want everything to work for everything up to this point. In the next phase, we will start adding more functionality.

```
MENU_PROMPT = """------  Game Shop Point of Sale  ------
(1) Sales Transactions
(2) Table Maintenance
(3) Reports
(9) Exit
Your selection: """
```

Table Maintenance

Build your nested menu items and connect these previously created functions.

- Insert Publisher
- Insert Game
- Delete Publisher
- Delete Game

```
TABLE_MAINTENANCE_PROMPT = """------  Table Maintenance  ------
(1) Insert Customer
(2) Insert Publisher
(3) Insert Game
(4) Delete Customer
(5) Delete Publisher
(6) Delete Game
(7) Insert Dummy Data
(9) Exit
Your selection: """
```

Reports

- Display all publishers
- Display all games
- Display all games and publishers

```
REPORTS_PROMPT = """------  Reports  -------
(1) Sales by Publisher
(2) Sales by Game
(3) Sales by Genre
(4) Sales by Platform
(5) Display Publishers
(6) Display Games
(7) Display Customers
(7) Display Publishers & Games
(8) Display Sales Transactions
(9) Exit
Your selection: """
```

New Table Maintenance Menu Items

Our table maintenance menu prompt.

```
TABLE_MAINTENANCE_PROMPT = """------  Table Maintenance  ------
(1) Insert Publisher
(2) Insert Game
(3) Insert Customer
(4) Delete Publisher
(5) Delete Game
(6) Delete Customer
(7) Insert Dummy Data
(9) Exit
Your selection: """
```

Add the following functions and SQL to the Table Maintenance menu. Use the same pattern of functions and code we used with Insert Publisher and Insert Game.

- Insert Customer
- Delete Customer

```
REPORTS_PROMPT = """------  Reports  -------
(1) Sales by Publisher
(2) Sales by Game
(3) Sales by Genre
(4) Sales by Platform
(5) Display Publishers
(6) Display Games
(7) Display Customers
(7) Display Publishers & Games
(8) Display Sales Transactions
(9) Exit
Your selection: """
```

Add the following code and SQL to the Reports menu.

- Display Customers

Stay tuned for more Fun with SQLite!

Assignment Submission

1. Attach the program files.
2. Attach screenshots showing the successful operation of the program.
3. Submit in Blackboard.
