

Linux Fun Activities 2

NOTE: These activities were inspired by Think Aloud's by a student in a previous class.

Time required: 15 Minutes

Activity 1: The Train

Sometimes you mistype the **ls** command as **sl**. Let's make the "command not found" a little more fun by having a train run through the screen instead. It moves from the right of the screen off the left of the screen.

```
# Install sl
sudo apt install sl
# Run sl to see the train
sl
```

Activity 2: Fortune Teller

- ## 1. Turn your Linux machine into a fortune teller!

```
(user@kalirachel)-[~]  
$ fortune  
You have an ability to sense and know higher truth.  
  
(user@kalirachel)-[~]  
$ fortune  
You'll never be the man your mother was!
```

```
# Install fortune
sudo apt install fortune
# Run fortune
fortune
```

Type in fortune to see what snarky thing your machine will say.

Activity 3: cowsay FortuneTeller

Combine the previous cowsay fun with fortune and make the cow say the fortune.

```
(user@kalirachel)-[~]
$ fortune | cowsay

/ You will hear good news from one you \
\ thought unfriendly to you.           /

      ^  ^
     (oo)\_____)
      (_____)  )\\
       ||----w |
       ||     ||
```

Activity 4: Jerry the cat

Save the best for last of course! This is Jerry the cat. He will chase your mouse all over the screen. If he catches the mouse he will sit and do funny things eventually laying down and going to sleep. Once you close the terminal Jerry disappears.

```
# Install oneko
sudo apt install oneko
# Run oneko
oneko
```

```
Done
automatically ins
go-12 girl1.2-xfco
ibnginx-mod-http-i
```

```
(user@kalirachel)-[~]
$ oneko
```

As always, I hope you enjoyed the fun things you can do with Linux.

Assignment Submission

1. Attach a screenshot of a cowsay fortune to the assignment in Blackboard.
